

Tutorial 4 and 5

Q What is cloudsim?
→ cloudsim is a simulation tool. This helps research and students study how cloud computing env work without needing real cloud infra.

Q What does cloudsim do?
→ cloudsim allows users to do:

- ① Simulate cloud infrastructure
- ② Testing scheduling and Resource Allocation
- ③ Evaluating performance
- ④ Optimize cloud service

Prerequisites - JDK 8 or higher

- Eclipse
- cloudsim source code
- Apache common math lib

Run a cloudsim example:
Eg: cloudsim Example.java in source folder
output will display on console.

Output:
Starting cloudsim examples
Initializing
Starting cloudsim version 3.0
Datacenter-0 is starting

Simulation completed
output states → success
cloudsim example1 finished!
